

Auto Bagger

 **Fill twelve poly or burlap bags at the same time**

 **Self load from large piles**

 **Easy operation and maintenance**

Built to provide an easy way to fill sandbags for flooding, landscaping, and excavation purposes, the EDGE Auto Bagger can help you to make quick work of that previously tedious job. The design allows an operator to fill up to twelve 14" x 26" (355 x 660 mm) poly or burlap bags at the same time! Simply attach the bags, scoop the sand, tilt the bucket back to fill the bags and drop them. All that is left to do is tie the bags!

One hydraulic cylinder holds all the bags open and in place so that filling is as easy as scooping and tilting. This unique attachment is a must have for landscapers, construction crews and municipalities, as it will pay for itself in time savings alone. Complete with mount, hoses and couplers.
