

NESHAP: How can Ziegler Power Systems help?

Ziegler Power Systems has the knowledge, experience, and capability to work with owners and operators of sources affected by the EPA NESHAP regulations. We not only are experts on Caterpillar generator sets, but also can offer solutions for most other manufacturers' generator equipment.

We offer range of solutions, customized to fit the different needs of specific owner/operators.

1) **Turn-key Compliance**

Ziegler has the ability to do everything to get your generators compliant with NESHAP. This includes evaluation of sources, recommendations, assistance with Initial Notification requirements, engine modifications and after-treatment installation, monitoring / compliance equipment, and services. The result is a NESHAP compliant site.

2) **Emissions Components and Engine Modifications**

Ziegler offers the emissions components, engine kits, and site installation needed for NESHAP compliance. This includes options such as Diesel Oxidation Catalysts (DOC), crankcase ventilation kits, and CAT engine modifications that may be needed to make existing sources compliant. The result is equipment and installation according to specifications.

3) **Testing and Site Evaluations**

Ziegler has the technical resources and equipment to evaluate specific emission sources and facility sites. Experienced personnel will visit your site(s) to gather information. They will measure emissions and backpressure and look at installation alternatives. When finished, we will present a performance report, installation alternatives, and recommendations.

4) **Information and Recommendations**

Ziegler can provide technical guidance, engine technical specifications, interpretation of regulations and engine performance, evaluations, and recommendation alternatives for NESHAP sources.

Key Dates: **8/31/2010:** Initial Notification to the EPA if you own affected sources
 5/3/2013: Affected sources must be compliant with NESHAP
