

Power Transformer Maintenance

Protect your critical power supply system with Advanced Electrical Services from Ziegler Power Systems. Ziegler-certified Advanced Electrical Services technicians collect and interpret data from your transformer for end-of-life planning, which can help prevent unexpected downtime, catastrophic failure, and major financial consequences.

Liquid-Filled Transformer Oil Analysis

- Assess the electrical and mechanical condition of your equipment to predict future repairs or replacements
- Recommended frequency: Every 12 months

Transformer Inspection, Maintenance, and Testing

- Clean, inspect, and verify proper operation
- Conduct electrical testing, including turns ratio, power factor, and resistance
- Recommended frequency: Every 24 months

Watchguard Preventive Maintenance Service *Protect Your Power*

Watchguard, a long-term maintenance planning and product support program, offers multi-year budget planning and delivers improved equipment reliability.
